STUDY SPOTLIGHT: MENTAL/BEHAVIORAL HEALTH

Remote Cognitive Behavior Therapy for Major Depression in Primary Care

West Virginia ranks 42nd out of 50 states for access to mental health treatment resources. The study aims to evaluate the extent to which access to remote internet-based cognitive behavior therapy in rural West Virginia will improve treatment of patients with major depressive disorder. Major depressive disorder often can occur with various kinds of anxiety and substance-use disorders and can have devastating effects on those who experience it and their families.
